

**National Interagency Coordination Center
Incident Management Situation Report
Tuesday June 10, 2014 – 0530 MT
National Preparedness Level 2**

National Fire Activity

Initial attack activity: Light (82 new fires)
 New large fires: 0 (*)
 Large fires contained: 1
 Uncontained large fires: ** 3
 Area Command Teams committed: 0
 NIMOs committed: 0
 Type 1 IMTs committed: 1
 Type 2 IMTs committed: 1

** Uncontained large fires include only fires being managed under a full suppression strategy.

Predictive Services Discussion: A weak upper level disturbance associated with low pressure in southern California will bring isolated thunderstorms and gusty wind to portions of California and the Great Basin today. Another weak feature will move through the Northern Rockies and Northern Plains with storms focused along a cold frontal boundary from Montana through the Dakotas. Further east, a closed low pressure system will move east from the Mississippi Valley to the Ohio Valley today with showers and thunderstorms. For Alaska, it will remain cool and unsettled in the southwest while dry, high pressure will persist for the central and eastern part of the state.

WILDLAND/URBAN INTERFACE -- STRUCTURE PROTECTION

Operational Engagement Category

The primary consideration of any operation is to assure firefighter and public safety. It is a must to assess potential fire behavior, ingress/egress routes, nature of the threat, hazardous materials, and available water supplies before engaging in the protection of any structure.

- Factors that may make an attempt to save a structure hopeless or too dangerous include:
 - The fire is making a sustained run and there is little or no clearance between the structure and the fuel.
 - The fire behavior is extreme; spot fires are numerous and the spread is outpacing containment.
 - Water supply will not last as long as the threat of the fire.
 - The fire intensity dictates that you leave the fire area immediately.
 - The structure is constructed of wood and has a wood, shake roof.
 - The roof of the structure is more than one-quarter involved.
 - There is fire inside of the structure or windows are broken and there is no way to quickly repair them.
 - You cannot safely remain at the structure because your escape route could become unusable.

- When implementing a plan to protect structures, consider the following:
 - Do not enter a burning structure unless you are trained, equipped, and authorized. Firefighter safety and survival is the number one priority.
 - Always stay mobile and wear all of your PPE.
 - Back in equipment to allow for a quick escape.
 - Coil a short, charged line with fog nozzle on your engine for safety and quick knock down capability.
 - Don't make long hose lays. Keep at least 100 gallons of water reserve in your tank.
 - Check the road system before the fire approaches. Know bridge limits, alternate access routes, and turnarounds for your vehicle and other support vehicles.
 - Determine if residents are home. Leave on the inside and outside lights, regardless of the time of day. Close the garage door.
 - Place the owners' ladder at a corner of the home on the side with the least fire threat.
 - Coil and charge garden hoses.
 - Check and mark hazmat; e.g., LPG, pesticides, and paint storage.
